DETAILED ACTION
EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Pedro Rojas(Reg No. 63008) on 8/10/2009.

52. (Currently Amended) Computer executable software code stored on a ~~computer readable medium~~ multimedia device, comprising:

code to determine a current location for a multimedia device using positional information provided by a cellular network or short-range wireless communication medium;

code to compute location-based authentication data using the positional information;

code to encode multimedia content created on the multimedia device with said location-based authentication data by computing a hash value on a combined expression of the multimedia content said location-based authentication data and

identification data including at least one of user identification data and device identification data, wherein said encoding creates a content identity key that authenticates the multimedia content as being created at a certain physical location and time; and

code to transmit the encoded multimedia content to a content certification entity via wireless communication, the content certification entity verifying the authenticity of the encoded multimedia content based on the content identity key prior to distribution.

Allowable Subject Matter

Claims 1-52 are allowed.

The following is an examiner's statement of reasons for allowance: The Applicant's invention is directed to embedding a multimedia content with location data and identification information.

The Applicant's argument that the positional information is provided by a cellular network or short-range network as opposed to a GPS system is persuasive see Page 12 Remarks of 5/29/09. And further mentions the accessibility of said network inside buildings and underground without the need for specialized units see Page 13.

The closest prior art found is US Patent 5794139 to Mizikovsky et al., where Mizikovsky discloses the mobile network where a authentication key is generated from the random

number and identification data see Col 3 Ln 46-56. And further Mizikovsky discloses the key being generated from a mixture of serial number, user selected value, and system selected value see Col 7 Ln 2-15. However, Mizikovsky does not disclose the multimedia content that embedded with location and time data.

The next closest prior art is US Patent 4860352 to Laurance et al, where Laurance discloses a message that is appended with location information gained from satellite systems that is used for authentication see Abstract. However, the instant explicitly mentions the location data being provided from non-GPS system, e.g. WLAN, Bluetooth, and etc see Remarks of 5/29/2009 Page 13 .

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
